

Clear-G

Protein stability and a clear finish

Granulated sodium-calcium bentonite binds haze-forming substances and may reduce grassy or herbal off-notes. It works even in heavily turbid must at low pH. Allow it to swell in a small amount of water for at least one hour before use.

Product specifications

Type	Granulated sodium-calcium bentonite
Dosage	10 g per 25–30 L
Swelling ratio	One part granules to six parts water
Minimum swelling time	One hour
Recommended temperature	Approximately 15 °C
Product number	122002

How to use

01 Prepare the suspension

While stirring, sprinkle one part granules into six parts water. Allow to swell for at least an hour and mix thoroughly again.

02 Add

Stir the suspension into wine or must and leave to clarify at approximately 15 °C.

Effective under difficult conditions

It needs little water and can be used after one hour of swelling. It is also suitable for heavily turbid batches with low pH.

Storage and safe use

Store in a cool, dry place. Follow the current instructions, dosage and safety information on the packaging. Keep out of reach of children. Check the best-before date and batch number on the pack.
