

NUTRIMA

Nutrition for distillation mashes

NUTRIMA combines diammonium phosphate and thiamine to nourish yeast in mashes intended for distillation. Adding it in two stages supports yeast growth and continuing fermentation. If the start is delayed, check batch conditions and temperature.

Product specifications

Type	Multi-component nutrient for distillation mashes
Dosage	2-3 g per 10 L
Addition	In two stages of fermentation
Composition	Diammonium phosphate; vitamin B1 (thiamine)
Application	For oenological applications
Product number	122052

How to use

01 First addition

Stir the first portion into the batch when pitching, in accordance with the product instructions.

02 Second addition

Add the remaining portion later in fermentation and distribute evenly.

If fermentation does not start

If the response after the first addition is weak or absent, the entire sachet may be used immediately in high-sugar batches or at unfavourable temperatures. Do not exceed the total recommended amount.

Storage and safe use

Store in a cool, dry place. Follow the current instructions, dosage and safety information on the packaging. Keep out of reach of children. Check the best-before date and batch number on the pack.
