

PIRO Ferm

Protect must and stabilise wine

Potassium metabisulphite is used to stabilise must and wine and to prepare a cleaning solution for equipment. It limits unwanted microorganisms and wild yeasts. Ensure good ventilation, prepare solutions fresh and follow the product-specific dosage.

Product specifications

Type	Stabilising and sanitising preparation
Application	Winemaking, brewing and distillation processes
Must stabilisation	0.5–1 g per litre
Wine stabilisation	0.5–1 g per litre depending on pH
Equipment sanitising	20 g per 1 L water
Composition	Potassium metabisulphite (E224)
Product number	122014

How to use

01 Treat the must

Calculate the dose from the volume, dissolve the product and distribute evenly through the must.

02 Stabilise the wine

Consider pH before use and distribute the solution throughout the wine.

03 Prepare an equipment solution

Prepare a fresh solution of 20 g per litre of water and use it with good ventilation.

04 Discard used solution

Do not reuse a spent cleaning solution.

Storage and safe use

Store in a cool, dry place. Follow the current instructions, dosage and safety information on the packaging. Keep out of reach of children. Check the best-before date and batch number on the pack.
