

Bentonite GRAN

Clarify wine and must effectively

Bentonite GRAN binds proteins and may help reduce unwanted grassy or herbal notes. Its granulated form produces less dust and is easy to measure.

Product specifications

Type	granulated fining agent
Composition	granulated sodium-calcium bentonite
Application	clarification of wine and must
Dosage	3-15 g per litre
Swelling ratio	1 part bentonite to 6 parts water
Working temperature	13-15 °C
Typical clarification time	24-48 hours, depending on conditions

How to use

01 Mix with water

Add the bentonite to water at a 1:6 ratio while stirring continuously.

02 Allow to swell

The preparation can be used after 45 minutes. A longer swelling period may improve its performance.

03 Add to the batch

Add the swollen bentonite to the fermenter and thoroughly mix the wine or must again.

Storage and safe use

Store in a dry, cool place at no more than 20 °C, preferably refrigerated. Follow the current packaging instructions. Use only as intended and keep out of reach of children.
