

Yeast Nutrient with Thiamine

Support yeast growth with thiamine

Vitamin B1 (thiamine) supports yeast growth and activity. Together with diammonium phosphate, it may improve fermentation performance as well as the flavour and aroma of the finished drink.

Product specifications

Type	universal yeast nutrient with thiamine
Composition	diammonium phosphate (DAP) and vitamin B1 (thiamine)
Application	all types of wine and cider
Dosage	1 g per 2.5–3 L of batch
Function	supports yeast growth and fermentation performance

How to use

01 Measure the dose

Measure 1 g of nutrient per 2.5–3 L of prepared batch. Do not exceed the recommended amount.

02 Dissolve in must

Dissolve the measured amount in approximately 100 mL of must.

03 Add before the yeast

Add the solution to the fermenter before pitching the yeast and mix thoroughly.

Direct addition

If required, add directly to the batch, mix thoroughly and observe the recommended dosage.

Storage and safe use

Store in a dry, cool place at no more than 20 °C, preferably refrigerated. Follow the current packaging instructions. Use only as intended and keep out of reach of children.
